华夏中文学校 Java1 新生班课程简介

Java language course is designed for student start from scratch, learn from language basic to OOP programing. Not only teach students how to write Java program, also teach them how to take class notes by using Markdown document, and how to write better code.

Try to build skill on user interface, business logic, database, unit test, logging, documentation, and product deployment. Very important, instructor will help each student write their own Java Notebook which include everything they have learned in the class, for future reference.

This course does NOT need more math background, it suites for any age of student. Actually, start learning computer language can be very early age of students.
